TERM

The Sub-Fund is established for an unlimited duration. However the Board of Directors may decide to close this product under certain circumstances.

OBJECTIVES

The Sub-Fund's portfolio will invest in equities, similar transferable securities (e.g. convertible bonds) and fixed-income or floating-rate notes admitted to official listing on a stock exchange or dealt in on another Regulated Market.

The Sub-Fund is actively managed without any reference to a benchmark. The Investment Manager has discretion over the composition of its portfolio subject to this objective and investment policy.

The Sub-Fund may also invest up to 20% of its net assets in bonds rated lower than investment grade or without rating.

The Sub-Fund may hold Ancillary Liquid Assets (up to 20% of its net assets) in order to cover current or exceptional payments or for the time necessary to reinvest those Ancillary Liquid Assets in eligible assets. It may also invest on an ancillary basis in units of other UCIs, as well as in deposits and money market instruments.

The Sub-Fund may invest up to 10% of its net assets in SPACs that are eligible and qualify as transferable securities within the meaning of Article 1 (34) and Article 41 of the 2010 Act and Article 2 of the 2008 Regulation.

In order to manage foreign exchange risks, investments in currencies other than the portfolio's reference currency may be hedged.

The Sub-Fund will use Securities Lending transactions to generate additional capital or income up to 100% of the Sub-Fund's net assets (expected percentage is 30%).

Sale of shares in the Sub-Fund can be made on any business day.

What are the risks and what could I get in return?

Risk indicator

The risk indicator assumes you keep the product for 3 years.

The risk can be significantly different if you cash in at an early stage and you may get back less.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. The essential risks of the investment fund lie in the possibility of depreciation of the securities in which the fund is invested.

Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product does.

The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed:

- In the first year you would get back the amount that you invested (0% annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario.

- EUR 10 000 is invested

Investment of EUR 10 000	If you exit after 1 year	If you exit after 3 years
Total costs	EUR 489	EUR 1 052
Annual cost impact (*)	4.9%	3.3%

(*) This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at the recommended holding period your average return per year is projected to be 5.1% before costs and 1.8% after costs.

We have classified this product as 3 out of 7, which is a medium-low risk class.

This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact our capacity to pay you.

Please refer to the Prospectus for more information on the specific risks relevant to the product not included in the summary risk indicator.

This product does not include any protection from future market performance, so you could lose some or all of your investment. If we are not able to pay you what is owed, you could lose your entire investment.
